

Marvin Rubio wanted to upgrade to true Disaster Recovery Solution, but was afraid of the cost and complexity.

BUSINESS CHALLENGE:

Like many companies, Fenner, Melstrom & Dooling (FMD) performs regular backups to tape each day. However, long recovery times have kept tape backups from providing FMD true business continuity. FMD realized a robust recovery solution was needed so critical data wasn't put at risk and employees would have immediate access to critical applications and data should a disaster occur.

THE SOLUTION:

The onQ Business Continuity Appliances not only take full system snapshots every hour, but maintain a virtual copy of the company's servers that can run right on the appliance. Now, if any server or even an entire site goes down, FMD's IT team can instantly reconnect users to their applications and data or easily retrieve individual files from any point-in-time.

BUSINESS BENEFITS:

- Eliminates tape management headaches
- Provides instant recovery on- and off-site in the event of a disaster
- Reduced backup intervals from days to an hour
- Reduced time and effort to rebuild servers
- Ability to simulate and easily test disaster recovery scenarios.

FMD realized a robust recovery solution was needed so critical data wasn't put at risk and employees would have immediate access to critical applications and data should a disaster occur.
