

Quorum HA Anywhere™

A Flexible Deployment Architecture Combining Cloud And Local HA

IT teams responsible for business continuity in an “always-on” environment know that they have to choose between the high performance of a local HA deployment and the cost savings of a cloud solution. This choice between performance and cost often leads to a solution that mostly fits, but doesn’t provide the maximum benefits to the business.

The Quorum difference

With Quorum, you don’t have to choose one deployment strategy, our HA Anywhere architecture means that you mix and match the strategies that best suit your business needs. Using any combination of cloud, local and remote, we can build an architecture that exactly matches your business requirements, providing the highest level of performance and security in the industry.

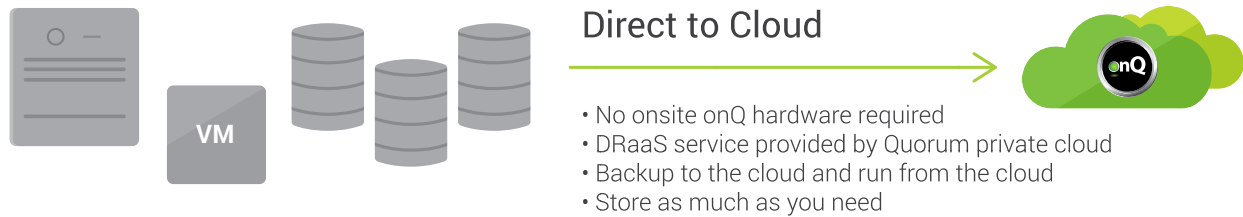

At the core of HA Anywhere is Quorum onQ, a high performance, 1-click instant recovery instance that can be run in the Quorum cloud, run locally, or can be run remote. To the administrator, all instances work together and are managed via the same centralized management console to provide an ease of use, not seen in other products.

onQ Cloud

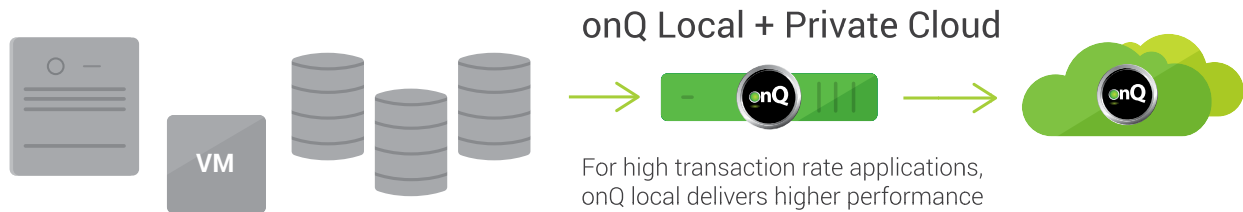

The onQ cloud instance is hosted in Quorum’s private cloud a fully encrypted, regulatory compliant, and high performance PRIVATE datacenter owned and operated by Quorum. Multiple high speed secure data centers power the Quorum cloud providing the highest levels of performance and security in the market.

In the event of a failure, an IT administrator simply logs into our web based management portal, chooses the server to recovery and boots the recovery server. Recovery times take minutes not hours.

About Quorum: Quorum provides Data Protection solutions helping businesses worldwide to protect their mission-critical data with an all-in-one, easy-to-use, 1-click backup and instant recovery solution. Our onQ product provides backup, recovery and storage replication of your mission-critical data after any storage, system or site failure. Regardless of which deployment environment is selected for your business, Quorum protects mission-critical data under any circumstance and threat. Quorum is modern-day data protection for your business, serving customers worldwide, with offices in the US, UK and business affiliates with offices in South Korea and the UAE. Customer Servers and Data

onQ Local

From onQube to POD, our award winning appliances have the performance and features to provide local High Availability for even the highest transaction rate servers. Using our proprietary snapshot technology, we can instantly recover any server or file with just a few clicks.

The appliance is hardened against malware and other security threats, is installed on its own network segment, and is not a part of Microsoft Active Directory. In addition, all data in flight and at rest is encrypted, and all snapshots are automatically tested, providing the highest possible security for your data.

onQ Remote

For customers that want to protect against a site wide outage, we offer a onQ remote. In this configuration, a second appliance is either installed and configured at a secondary customer site, or in the Quorum cloud.

In both cases, the onQ local appliance provides onsite High Availability, but also streams data offsite to the secondary DR appliance. In the event of a site failure that renders the local appliance unavailable, the DR appliance is started from the same web based administration console. Once booted, end users are redirected to the remote appliance to resume work.

Cloud and Local HA that fits your business

HA Anywhere is more than a deployment strategy, it's our vision. It's our commitment to creating the perfect backup and recovery strategy for your business. Unlike other vendors that push you towards a single strategy, we have crafted our products and services to be interchangeable, providing you with the highest level of flexibility and security in the market.

See for yourself what HA Anywhere can do. Contact us now for a free, no obligation, 30 minute evaluation. We will craft a custom strategy to protect your business now, and into the future.
